Bob,

Attached are the response time from 10-15 through 5-16 that we documented from every medical run. This data was collected during that time in effort to capture when we had a licensed unit on scene with the minimum of two personnel. As you will see the clock stops when either an officer or second unit arrives. There is a significant difference between the first arriving unit and when the clock stops for both average and fractile. I also attached two spread sheets that I originally sent to Paul concerning the Fire and EMS Tier system which was put together by a peer group.

Scott
