BOT Email 2017-002, EMS Response Fact Sheet - Oakland Township

The purpose of this letter is to give you the bare minimum facts you need to know about EMS response time. These were selected from my longer recent letter. If you find any of these facts to be in error, please let me know and I will correct this report and re-send it.

Our EMS 90% fractile response time, measured correctly during a recent period was 11.5 minutes.

This is longer than OCMCA requirements of 6 or 8.

Period	Average (minutes)	Standard Deviation (minutes)	90% Fractile (minutes)= avg. + 1.29 x std dev	Data Collection Method
10/1/15-5/31/16	7.69	2.93	11.5	Correct (first unit on scene)

Additional detail is available on my website here:
